ENVIRONMENTAL & SAFETY INFORMATION ON Image3D PRODUCTS

Image3D is very concerned about the environment and participates in providing environmentally friendly products as well as participating in recycling programs for all of its waste. Image3D SAFETY TESTING attached.

Image3D VIEWERS

Image3D viewers are made using a blend of reground (approximately 25%) ABS and natural ABS (Acrylonitrile Butadiene Styrene). ABS is a thermo-polymer widely used throughout the world in the production of injection molded items such as automotive parts, computer cases, plumbing pipes, airplane parts, car bumpers, toy building blocks, golf club heads and many other molded plastic materials. ABS is extensively used in the manufacture of inexpensive, durable products.

ABS is widely recycled and reused worldwide by a regrinding and/or Re-pelletizing process. Image3D uses a mixture of reground (approximately 25%) ABS and natural ABS in the injection molding process for its viewers. Any scrap material is reground and reused so no ABS waste is sent to landfills.

Recycling centers throughout the world accept ABS for regrinding.

ABS products often have a symbol, representing the resin coding system that was introduced in 1988 by the Society of the Plastics Industry.

Image3D custom reel are made of a polyester film material categorized as HDPE from Eastman Kodak and can be recycled. The chemicals used in the film processing equipment, also supplied by Eastman Kodak, is biodegradable with the exception of the silver content. Image3D reclaims 99.97% of the silver so virtually none goes into the waste stream. Information supplied by Eastman Kodak is attached for reference. The laminate used to encapsulate the reels is a polyester film and is fully recyclable in the same manner as the reel film. Recycling symbol for the reels is Polyester HDPE #2

Image3D PACKAGING

Image3D packaging is fully recyclable. All corrugated materials and paper used in the production of packaging can be recycled in the standard method used worldwide for paper or corrugated materials.

ADDITIONAL INFORMATION

- 1. Testing for the following requirements was conducted by UL Verification Services, Inc., 611 Dream Valley Road, Rogers, Arkansas 72756. (479)636-8782.
- 2. The sample complies with Section 4.3.5.1(2) (ASTM F963-17), Surface Coating Materials Soluble Test for Metals.
- 3. The sample complies with Section 4.3.5.2 (ASTM F963-17), Toy Substrate Materials.
- **4.** The sample complies with 16 CFR 1307, Prohibition of Children's Toys and Child Care Articles Containing Specified Phthalates.
- 5. The sample complies with 15 USC 1278a, Lead in Non-Metal Children's Products.
- 6. The sample complies with 16 CFR Part 1303, Lead Paint Regulation.
- 7. The sample complies with Section 4.7 (ASTM F963-17), Accessible Edges (except labeling and/or instructional literature requirements).
- 8. The sample complies with Section 4.8 (ASTM F963-17), Projections (except bath toy projections).

	For products that are not specifically excluded you must contact the supplier to provide alcohol content (if any) water activity measurement and pH to determine if test report is required.		
	The supplier must submit a test report for products which are judged to be susceptible to microbial degradation or to have the potential to support growth. The report must indicate that the product was tested for microbial control and preservative effectiveness using an acceptable method.		
	The following organisms (at a minimum) are to be used to challenge the product: Staphylococcus aureus, American Type Culture Collection17 (ATCC) 6538; Escherichia coli; ATCC 8739; Pseudomonas aeruginosa, ATCC 9027; Candida albicans, ATCC 10231; and Aspergillus brasiliensis, ATCC 16404.		
	Evaluation criteria: (a) bacteria must exhibit a log reduction of >2 (that is, population must be less than 1 % of initial inoculum) at 14 days, and show no increase from the 14-day result at 28 days; (b) fungi, yeast, and molds must exhibit no increase from the initial inoculum at either 14 or 28 days. Pre-Screen Test for Presence of PVC		
Polymeric components of toys and child care articles are		
pre-screened to determine the presence of PVC by XRF /		
FTIR scan (see chemistry data sheet for details).		
Components determined to be PVC (vinyl) are then tested to		
determine compliance with the following Phthalates Regulations		
requirements.		
Phthalates Testing of Vinyl (PVC) Components		
All Toys and Child Care Articles that are determined to		
contain vinyl (PVC) components through pre-screening		
method above, are required to meet the Phthalates		
Regulations as indicated below.		
The vinyl (PVC) in any part of a toy or child care article that		
can, in a reasonably foreseeable manner, be placed in the		
mouth of a child under 4 years of age, shall contain no more

Asbestos - Products used in Modeling & Sculpture (SOR/2018		COMMENTS	
Applicable to children's modeling & sculpture products Third Party test report indicates that children's art material media used in modelling and sculpture contain no detectable presence of any type of asbestos (including actinolite, amostie, anthophyllite, chrysolite, crocidolite, cummingtonite, tremolite).		N/A - Not a modeling or sculpture material	
Asbestos - Children's Products (SOR/2018-196)			
Applicable to components of children's products that are suspected of media other than sculpture / modeling materials, play sand, powders client.		·	
Third Party test report indicates no presence of asbestos in products described above, or as requested by the client. Test Report Date (recommend dated within 1 year)		N/A - No applicable materials	
Note: The present Asbestos Regulations allow non-crocidolite asbestos for this requirement as long as it cannot become separated from the product. CTL cannot evaluate "separation" as no criteria is provided. CTL recommends No presence of asbestos for these products as Health Canada has indicated they will ban asbestos in 2018.
